

Future Mobility: Context Hub

PREMISE

Every system in the car today is reactive.

Context Hub adds a
proactive decision layer
on top, so the vehicle understands and
prepares your journey before you ask.

Basis: Hyundai named driver-specific personalization as
the next step in the Pleos Connect roadmap (Apr 2026)

REACTIVE

PROACTIVE

Navigation

needs a destination from you
average **15.7s** distracted while driving (SINTEF 24')

Gleo AI

needs a command from you
only voice within **NHTSA** limits (ETSC 24')

Payment

needs a card from you
1 in 5 US public chargers fails to charge (HBS 24')
47% experiences problems charging (S&P 25')

Fragmented signals: Location, Schedule, Spending History.
The only missing piece is connection → prediction.

A journey the car knows first

2 SCENARIOS , 8 MOMENTS.
ZERO INPUT

A Big Meeting Morning 30s commuter Tight mornings	T-40 MIN Departure recalculation Calendar + live traffic. “You need to leave now to be on schedule.”	BOARDING Ignition, Route, Briefing You never typed a destination. Gleo AI recaps your presentation and gives feedback.	EN ROUTE Prediction → Action “Should I order your usual iced americano nearby?” “Yes.”	ARRIVAL Hands-Free Coffee paid, points earned. You touched nothing.
	B Road Trip Weekend EV owner Weekend long-hauls	DEPARTURE Personalized Plan "I added a fast charger along your route as a stop. You tend to prioritize speed over cost."	MID-ROUTE Proactive adjustment A sudden closure ahead. The car reroutes on its own and swaps in a charger that fits the new path.	EV CHARGER Plug & Charge Plug in. Automatic charging and payment.

Context Hub architecture

WHY AI, NOT RULE-BASED

A rule is a fixed condition; real decisions mix traffic, habits, parking, which is different every day.
Rules react to conditions. AI learns the person.

UX PRINCIPLES

- ① Proactive prediction, user decision
- ② Wrong predictions cost nothing
- ③ Learn silently, explain on demand

Ready before you ever ask.

Mercedes Gemini agent in MBUX: memory, multi-turn talk	GM Gemini across all models est. 2026	Tesla SDV leader: xAI Grok (Beta)	Apple CarPlay · Android Auto Phone mirroring: no vehicle signals, no payment
All converge on AI that converses better. Nobody is connecting the dots to combine signals into proaction.			

USER

01	Cognitive load, removed	Destination entry, Charger, Payments: repetitive operations gone.
02	Fragmentation, unified	Calendar, navigation, and payment merge into a single flow.
03	Travel time, reclaimed	The car prepares the trip and the spending; you focus on the purpose.

BUSINESS

\$580B+

in-car payment market by 2030.
60% would like to pay via infotainment display

KPI

- ① Subscription conversion trial → paid
- ② CarPay transactions per vehicle / month

Where better UX becomes revenue

Context Hub roadmap

1 Trip prediction Destination, departure timing, and charging plans prepared in advance from schedule, traffic, battery level and more.	2 Trip personalization More you drive, more context. Recommendations adapt to you. Routes, charging, weather, and more.	3 Payment integration From EV charging to pre-orders, fueling, tolls, and parking: automated via CarPay. Applies equally to combustion vehicles.
USER A smoother, personalized journey, fragmented experiences unified.		HYUNDAI Subscription revenue · AIDV Focus · Future Mobility Integration

Good Navigation is Not Enough:
Anticipation is the next interface
